

To all Second year medical students:

Welcome to the second year student cardiology module. We hope you find this module fun and exciting. It is a very clinically based, patient oriented class. Our goal is to help you to translate book knowledge into clinical practice. **I cannot stress enough the need to attend all classes.** A lot of what you will be taught is by discussion and visualization with echos, x-rays and cardiac catheterization films. This cannot be transcribed. We encourage interaction.

The exam is case based and will come from the lectures and handouts. YES, THE EXAM MAY BE ON INFORMATION NOT DIRECTLY LECTURED ON. THE CONCEPT IS THE KEY.

Patients—do not read books.

Exam question / Challenge Policy:

Challenges will be heard by the course director. They need to be submitted in writing. Each challenge will be addressed directly, and only one challenge per question is allowed. References may be made to the lecture material/handouts to support your challenge, but video/audio clips will NOT be accepted as support. The program directors decision is final.

Lastly, most of the lectures can be found on our website, www.sjhg.org. Please refer to the student module tab on the left side of the page. Under the site are all of the lectures in Power Point format.

We look forward to a great module. If you have any questions call Kate Jurman at 856-755-1173 or email at cardiologyfellowship@sjhg.org.

Sincerely,

**John Hamaty, D.O., FACC, FACOI
Course Director**
